Did we learn anything from the global disruptions and climate change impact over the last year?

Floods in China, Europe to further disrupt already-stifled shipping industry

Heavy floods in parts of western Europe have severely disrupted cargo including railway links. This would not only disrupt the supply chain but have a severe spillover effect on sectors such as the motor industry and domestic appliances.

TRANSPORTATION

Suez Canal blockage is delaying an estimated \$400 million an hour in goods

Auto News / Latest Auto News / Commercial Vehicle / MHCVs

U.S. trucking industry disruptions to last as long as pandemic persists

"There are going to be disruptions and shocks to the system as long as the pandemic continues," he said in an interview with CNN when asked about the driver shortages in the trucking industry.

WORLD ECONOMY

Another shipping crisis looms on Covid fears in southern China

Digital transformation is 'only way' to build resilience in a company, says CEO

Climate change: Carbon emissions from rich countries rose rapidly in 2021

ENTERPRISE

The shift to digital has become a 'critical priority' for businesses

SUSTAINABLE FUTURE

The world won't be able to reach carbon neutrality without Asia, Suntory CEO says

Disruption is the name of the game

Current affairs

Indian exports to the world have seen a sharp increase, rising by ~11% in last 20 years

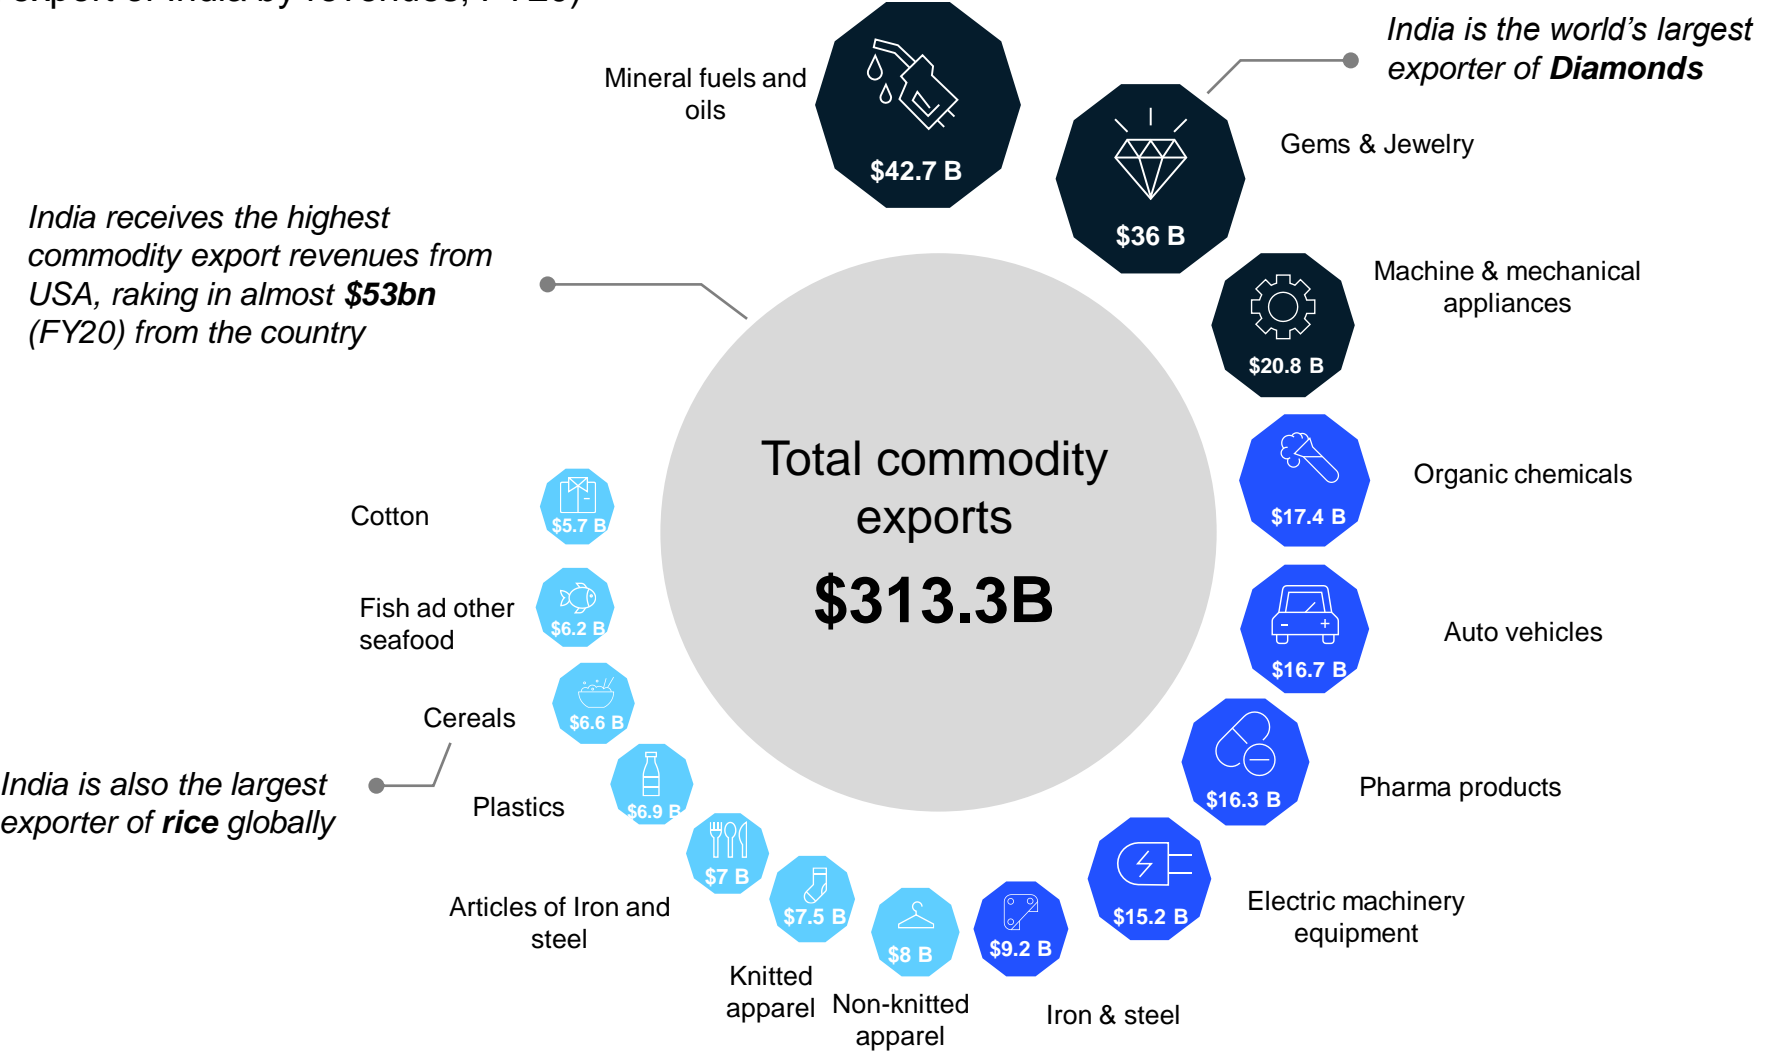

- India’s total export volume in 2020 was 313.3 USD Billion
- India’s exports have risen sharply from nearly 44 USD Billion in 2001 to it’s all time high of 336 USD Billion in 2013
- The top 10 export goods and services have a huge chunk of share of nearly 60% in the total export value
- **2014 Dip:** India’s export in 2014-2016 period decreased due to global slowdown and decrease in demand from China

Source: UN Comtrade, Ministry of Commerce and Industry

Commodity exports account for ~USD 313 billion export value in 2020, with mineral fuel and precious gems holding ~25% of the share

(Top 15 leading export of India by revenues; FY20)

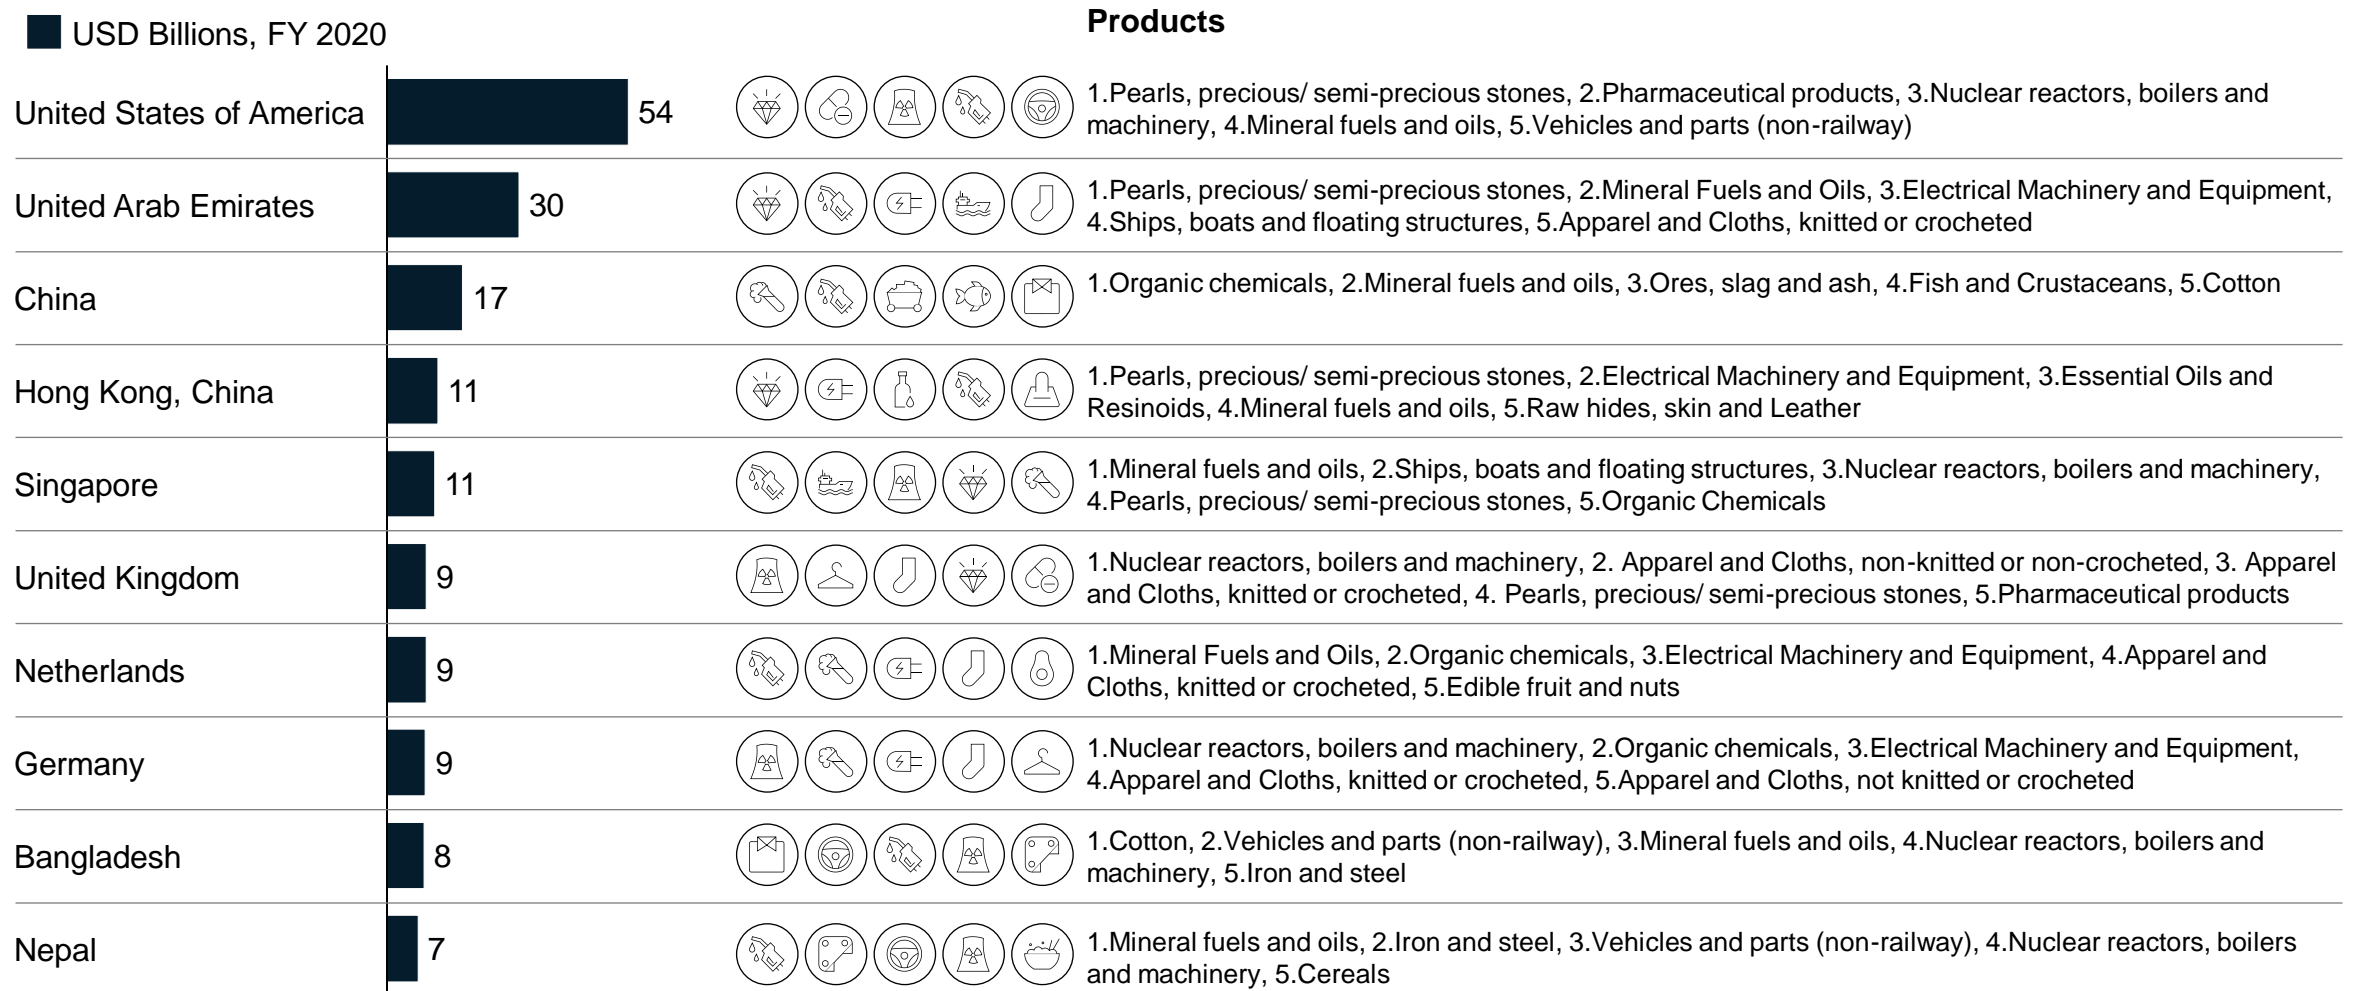

Top 10 principal exports in terms of commodity groups account for as much as 78% of total merchandise exports

■ USD Billions, FY 2019

Source: Trademap

10 countries account for more than 50% of India's export volumes, with USA and UAE capturing majority shares of 16.8% and 9.8% respectively

Chemical and Petrochemical Industry

- India is fourth largest Agrochemicals manufacturer and sixth largest manufacturer of chemicals in the world
- India is a big global dye supplier, holding approximately 16% of the world production of dyestuff and dye intermediates
- 100% FDI is allowed under the automatic route in the chemicals sector
- Tax breaks and special incentives through PCPIRs (Petroleum, Chemical and Petrochemical Investment Region) or SEZs will further support the industry
- Due to global monopoly of OPEC countries, India is importing fuel and petroleum in large amount. However, the processing and distribution of petrochemical products cater to a huge chunk of the Indian Market

Current affairs

We see three areas of potential significant impact for Digital and Advanced Analytics (AA) in Chemicals supply chain

■ Enabling technology

1 Predictive analytics in demand planning

- Probabilistic demand forecasting using predictive analytics (e.g., statistical regression and machine learning) and leveraging big data
- Increased forecast accuracy and granularity

- Machine learning: tree-based models, neural networks, etc.
- Advanced computing

2 Analytics based E2E network optimization

- E2E network optimization including closed-loop planning & margin-optimized production incorporating raw material supply, production planning, distribution, inventory, sales and demand
- Digital S&OP with integrated profit optimization
- Real-time supply chain visibility / transparency

- Advanced optimization engines
- Advanced modelling (e.g., multi-method modelling)
- Cloud-based technologies
- Digital ways of working (DWoW)

3 Robotics in material handling and transport

- Automated warehouse robots, robotic / automated cargo handling, autonomous guided vehicles (AGVs) for transport
- Increased speed, flexibility and safety while reducing cost

- Robotics including sensory systems
- Artificial intelligence (AI) & cognitive systems

Robotics use case examples in Chem SC and logistics (1/2)

Warehouse picking

IAM Robotics' Swift picks up specialty chemicals to fill order

Vision technology enables the robot to see and locate objects in 3D and real-time

Automated barcode scanning ensures the right products are picked and packed

Swift picks up specialty chemicals

Palletizing and depalletizing

- Palletizing & depalletizing robots can autonomously handle incoming raw materials and end-of-line packing and loading
- Robots can palletize / depalletize cases, boxes, bags, buckets, etc.
- For example...
 - MMCI robots palletize bags of fertilizer
 - Kuka robots palletize buckets of chemicals
- Robotic systems can also unload and load trucks
- Autonomous loading / unloading significantly, if not completely, reduces need for human handlers for loading and unloading

MMCI robot palletizes bags of fertilizer

Kuka robot palletizes buckets of chemicals

McKinsey & Company

Robotics use case examples in Chem SC and logistics (2/2)

Autonomous cargo movement

- BASF partnered with the VDL Groep to develop an autonomous guided vehicle
- The AGV is steered via transponders embedded in the road surface
- It formerly **took around 22 hours** for a railway tank car to be delivered from BASF's train station to one of the loading stations at the site; **with the AGV, this time is cut to just one hour**

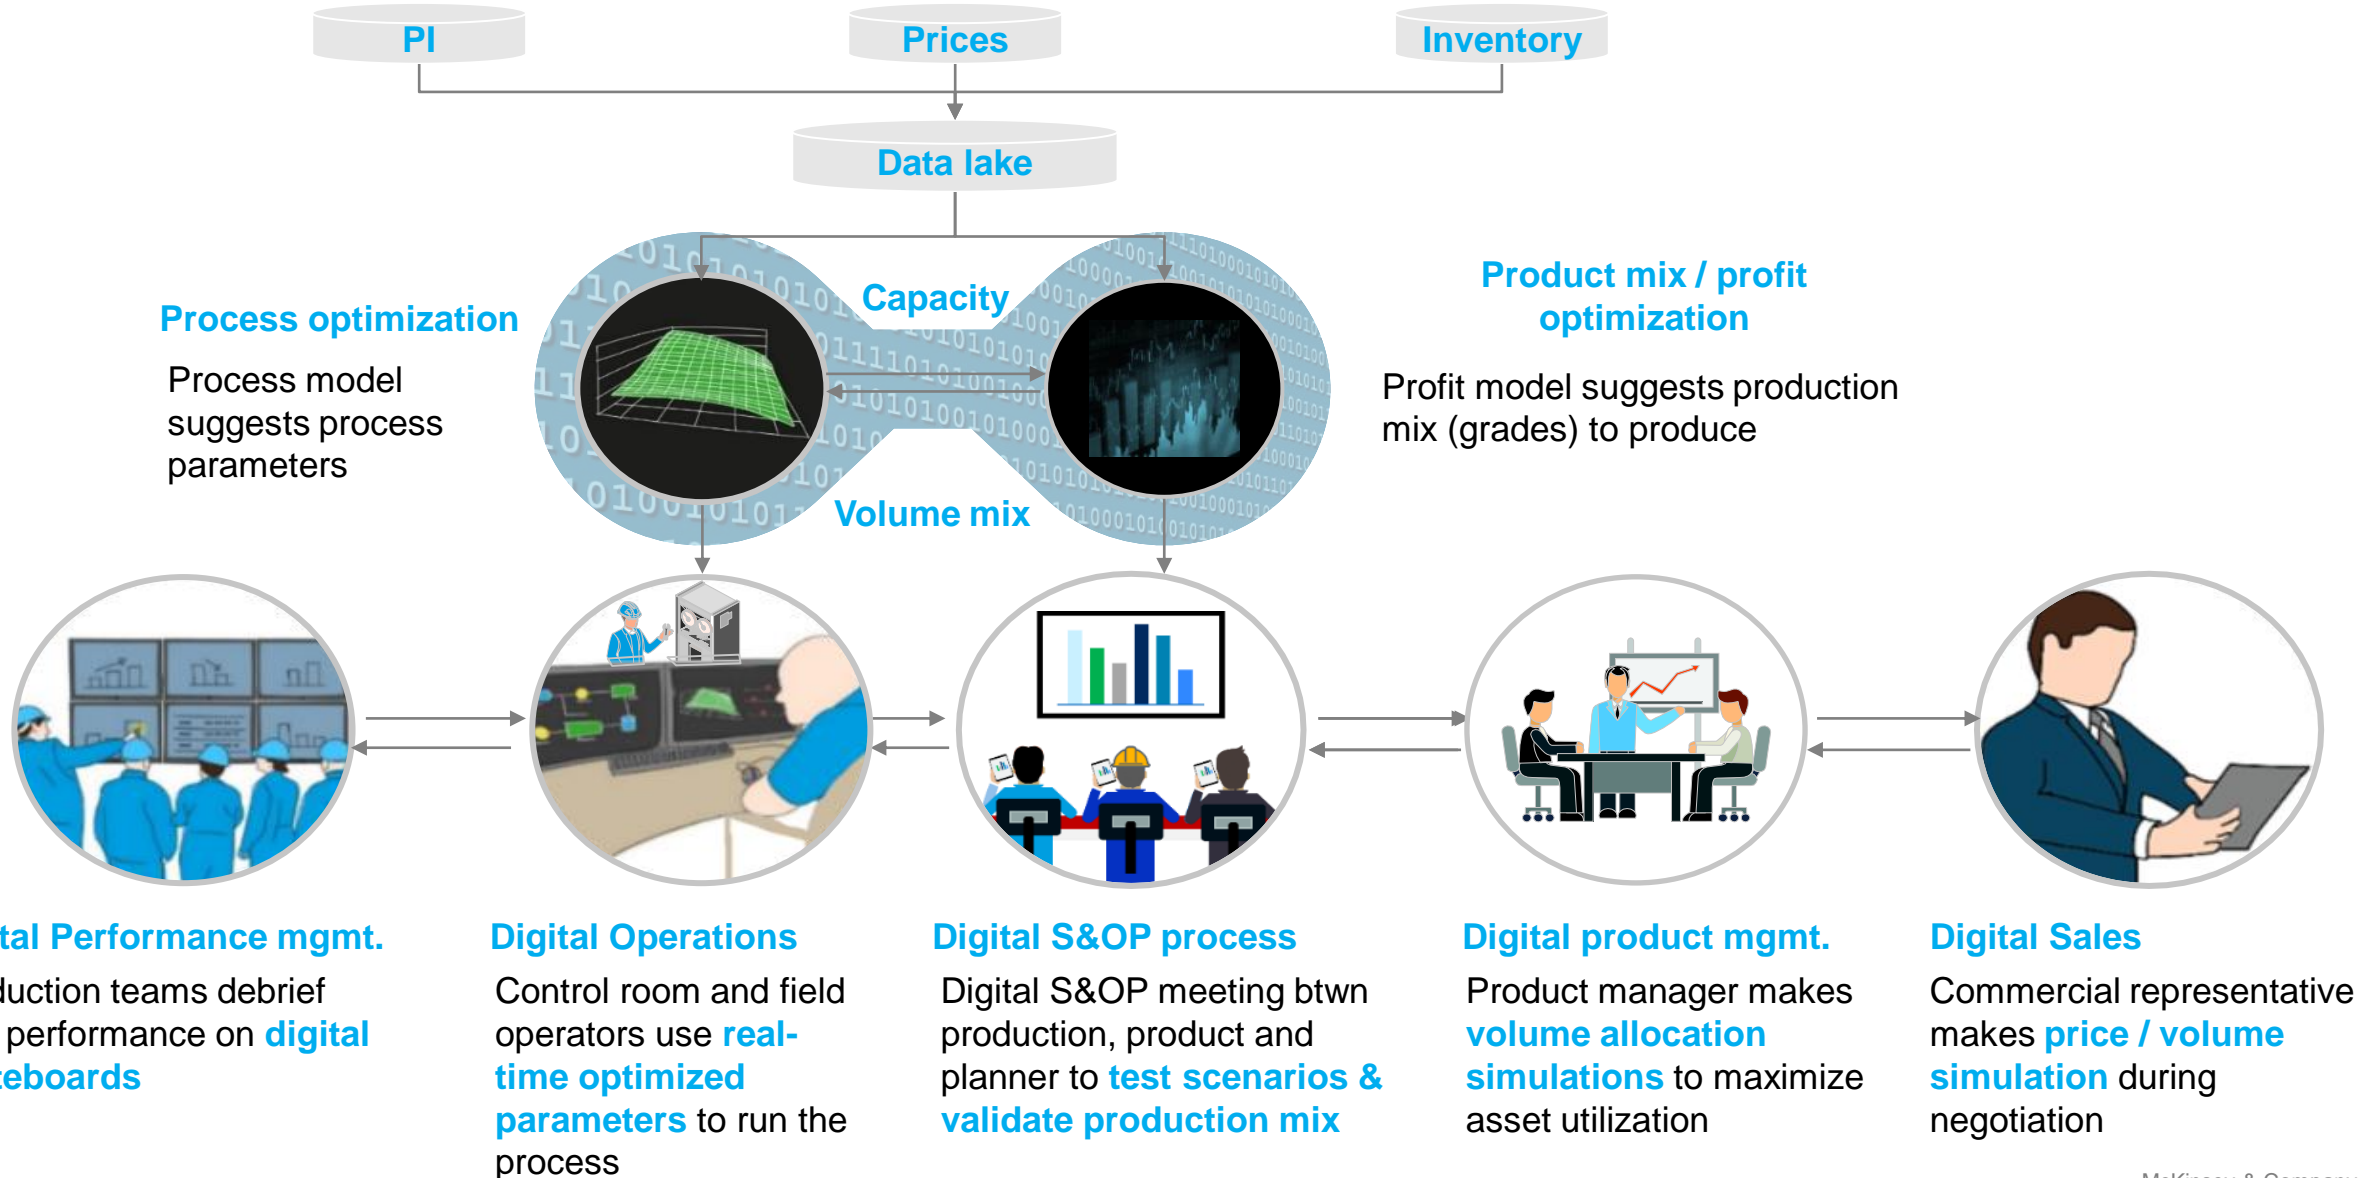

BASF & VDL's autonomous guided vehicle transports chemicals

- Katoen Natie started operating its first driverless truck at ExxonMobil's world-scale integrated manufacturing site in Singapore in 2018, transporting products between the company's packaging and intermediate storage facilities
- The pilot truck will operate on a **24/7 basis moving some 250,000 tons of product annually**
- After a six-month test run, the project will be gradually expanded to 12 trucks, moving some 3 million tons of product annually

Katoen Natie's autonomous guided vehicle transports chemicals

A digital S&OP process enables a new operating model with cross-functional digital interfaces

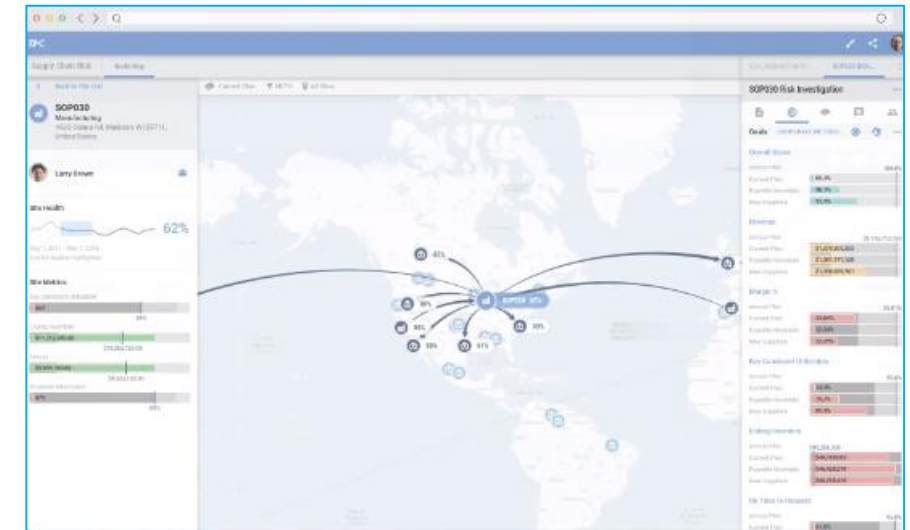

BASF targets E2E Supply Chain transparency with Kinaxis

- BASF recently piloted Kinaxis RapidResponse®, a leading cloud-based supply chain management solution based on concurrent planning
- RapidResponse uses a single cloud-based planning platform that lets users plan concurrently (via advanced analytics and machine learning) for every part of the supply chain – from sales and operations planning (S&OP) to demand, inventory, supply, capacity

“Creating a transparent and connected business process is key to our supply chain operations. Kinaxis provides us with the E2E planning platform, reducing planning latency, improving alignment of dependent processes, and fostering transparency between all functional elements of our business ”

- Mr. Jan Brüning, Smart Supply Chain Cluster Lead,
BASF

Disruption is the name of the game

Current affairs

Rates have surged

Rate development by trade lane, USD / FEU

1. Additional surcharges putting it more than quoted prices

Source: SCFI data sourced from SIN Clarksons

But it's not driven by global demand – only North America sees a peak

Cumulative average growth rate vs. 2 years before, %

Container liners and other owners are expected to continue investing in new boxes to solve the equipment shortage

Illustrative

■ Leasing company — Leasing company ■ Transport operator

Container fleet by owner category

Million TEU

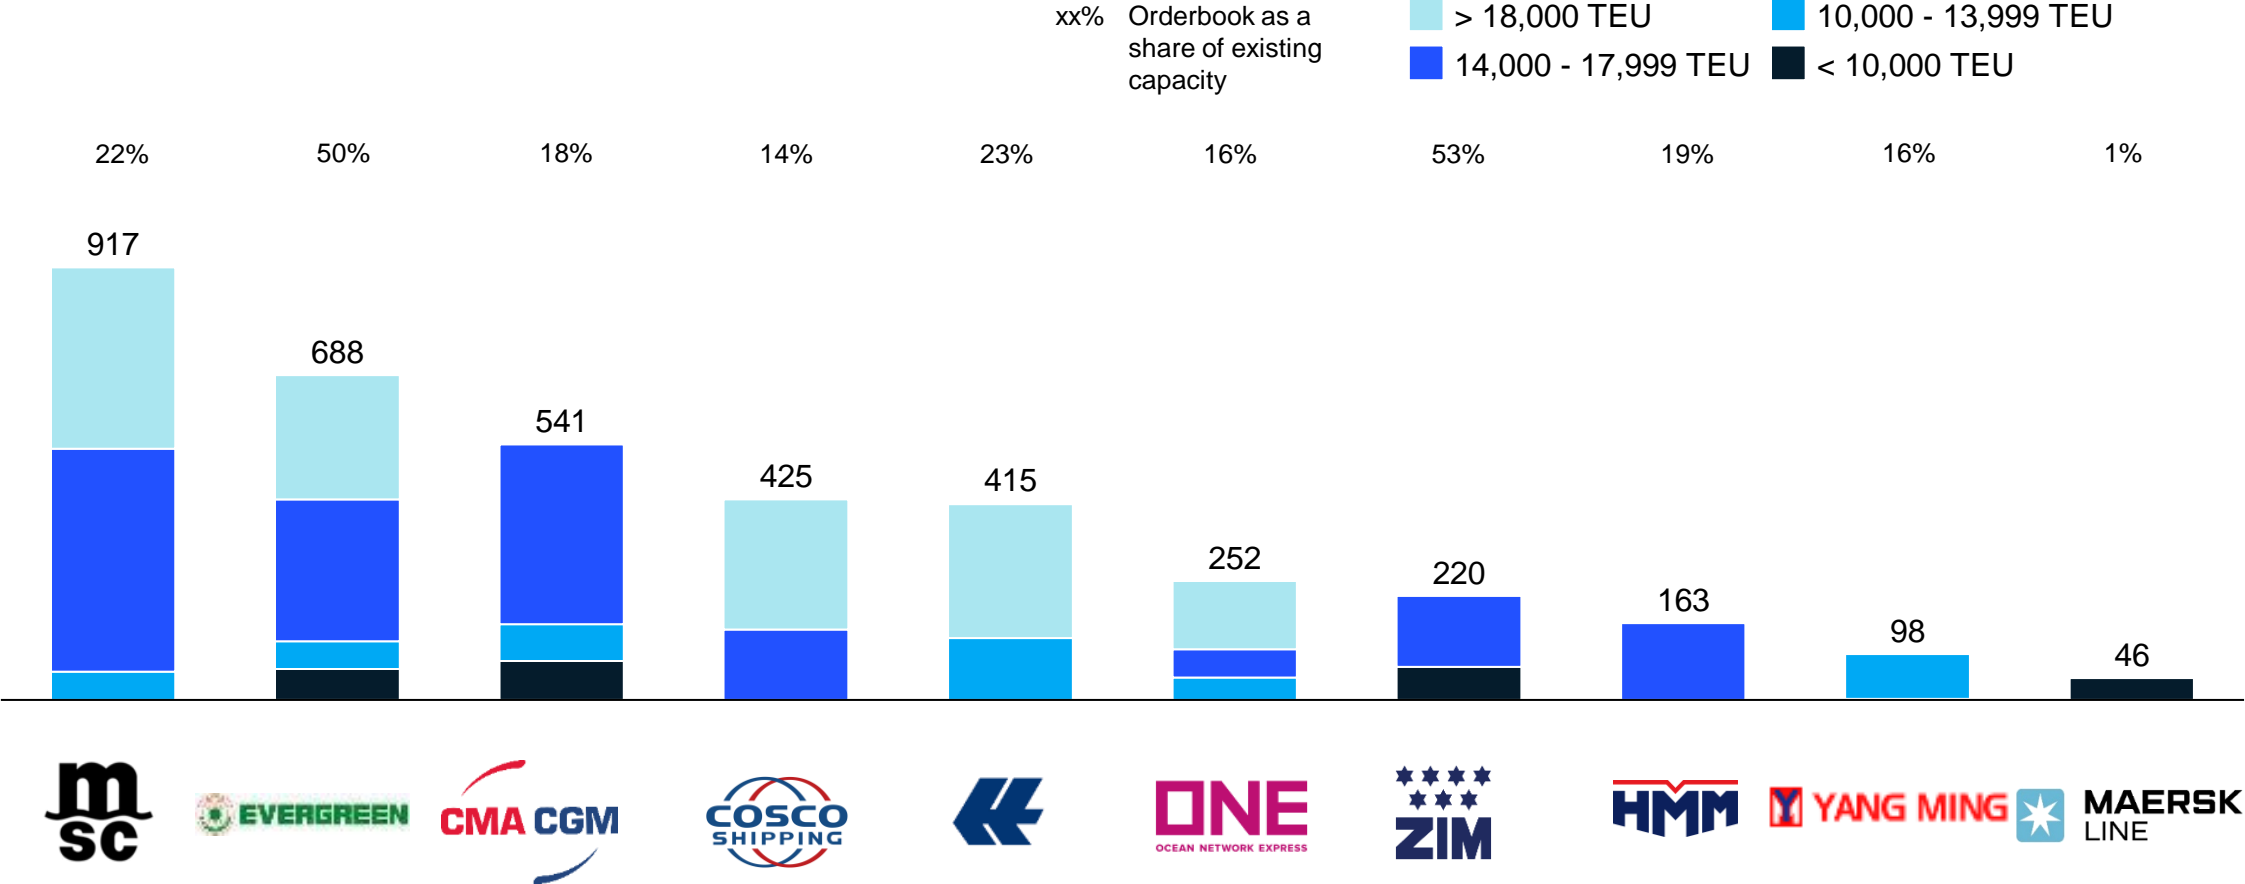

Liners are already investing to grow their fleet employing a mix of owning and leasing strategy:

- **Maersk:** increased 40-foot HC fleet by 9.7%, in 2020 and expects to increase that by a further 2% in 2021
- **Hapag-Lloyd:** executed an order of 210,000 container since April 2021
- **CMA CGM:** increased its container fleet by 8.7% in the second half of 2020.

Liners slowly adding orders for new vessels with some aggressively – Evergreen’s current orderbook is >50% of its capacity

Top container liners current orderbook, 000 TEUs
